Wikipedia, the free encyclopedia
(irected from [Web Page](#))

· **page** or **webpage** is a document or information resource that is suitable for the **World Wide Web** and can be accessed through a **web browser** and displayed on a computer or mobile device. This information is usually in **HTML** or **XHTML**, and may provide **navigation** to other web pages via **hypertext links**. Web pages frequently subsume other resources such as **style sheets**, **scripts** and **images** into their final presentation.

ages may be retrieved from a local computer or from a remote web server. A web server may restrict access only to a private network, e.g. a corporate intranet, or it may publish pages on the World Wide Web. Web pages are created and served from web servers using Hypertext Transfer Protocol (HTTP).

ages may consist of files of static text and other content stored within the server's file system (static web pages), or may be constructed by server-side code when they are requested (dynamic web pages). Client-side scripting can make web pages more responsive to user input once on the client browser.
